

# PATIENT MATERIALS LIST

Thank you for choosing Hyperbaric Physician of Georgia as your lymphatic/lymphedema - wound therapy provider.

Lymphedema is a condition that can be manageable. The therapy goal is to reduce the circumference of your extremity by incorporating compression into your plan of care. Initially, the use of bandaging materials will be important in reducing your extremity.

Once we reach the estimated goal, you will need to be fitted for a garment to retain the progress made.

**The items listed below will be required before starting your therapy sessions. You can order from any store(s) of your choice, not limited to the stores listed below:**

### COMPRESSION GURU
